

CASE STUDY

Enterprise Compliance & Performance Management Framework

Karime Martinez

Business Operations & Data Analyst

Executive Summary

Managing hundreds of mandatory H&S activities across multiple legal entities using disconnected spreadsheets and manual follow-up created significant compliance risks, reduced operational visibility, and limited the organization's ability to proactively manage regulatory obligations

Client	Industry	Project Duration	My Role
Global Food & Beverage Manufacturer	Food Manufacturing	2 months	Business Operations Consultant & Performance Management Lead

Team Size	Business Area	Project Type
Cross-functional H&S Team	Corporate	Enterprise Compliance & Performance Management Framework

Core Capabilities

- Operational Planning
- Regulatory Compliance
- Performance Management
- Process Automation
- Workflow Design
- Governance Frameworks
- KPI Management
- Dashboard Design
- Cross-platform Integration
- Business Process Optimization

Context

A multinational food manufacturing company manages multiple production sites operating under strict occupational health and safety regulations.

The H&S department was responsible for coordinating hundreds of mandatory annual activities—including regulatory reporting, audits, committee meetings, inspections, training programs, management reviews, corrective actions, budget execution, and KPI tracking—across multiple legal entities. These obligations were managed through disconnected spreadsheets and manual follow-up, creating operational inefficiencies and exposing the organization to significant legal and compliance risks.

Combining operational planning with structured performance monitoring creates stronger accountability, improves budget execution, and enables organizations to focus on strategic priorities rather than reactive management.

The Challenge

The organization lacked a centralized operational management framework capable of coordinating regulatory obligations, strategic initiatives, recurring activities, and performance monitoring across different plants and legal entities.

Critical tasks depended heavily on manual tracking and individual memory, resulting in delayed activities, fragmented reporting, inconsistent accountability, and increased exposure during regulatory inspections and external audits.

- **Eliminate manual tracking of compliance activities.**
- **Consolidate multiple operational planning sources into a single framework.**
- **Synchronize planning across AMATIA, ClickUp, and Google Workspace.**
- **Improve visibility by plant, legal entity, owner, and reporting period.**
- **Automate reminders, alerts, and executive reporting.**
- **Monitor operational performance using real-time compliance indicators.**
- **Reduce dependency on manual follow-up and individual knowledge.**

THE APPROACH

I designed an integrated operational governance framework that centralized all mandatory H&S activities into a single planning and performance management ecosystem.

Rather than replacing existing enterprise platforms, I developed a synchronized architecture connecting Google Workspace, ClickUp, and AMATIA to automate planning, reporting, notifications, KPI tracking, and compliance monitoring while preserving the organization's existing regulatory workflows. The solution transformed fragmented operational management into a centralized, data-driven decision support system.

Solution Desing

Implemented

Enterprise Planning Framework

- Consolidated annual operational planning
- Program-based work plans
- Monthly operational calendar
- Quarterly compliance reviews
- Annual strategic planning

Compliance Management

- Legal compliance obligations
- Government reporting schedule
- ARL reporting management
- Mandatory committee management
- Internal audit planning
- External audit preparation
- Regulatory inspections
- Management Reviews

Performance Management

- KPI monitoring
- Monthly scorecards
- Quarterly performance reviews
- Executive dashboards
- Program completion tracking
- Compliance maturity indicators

Automation

- Automated reminders
- Email notifications
- Deadline alerts
- Status updates
- Executive reports
- Automatic KPI calculations
- Cross-platform synchronization

Platform Integration

- Google Workspace
- AMATIA
- ClickUp
- Shared master database
- Automated synchronization workflow

Skills Demonstrated

Business Operations

- Operational Planning
- Business Process Design
- Operational Governance
- Performance Management
- Strategic Planning

Process Improvement

- Process Optimization
- Workflow Automation
- Business Process Standardization
- Cross-functional Coordination
- Operational Excellence

Compliance & Governance

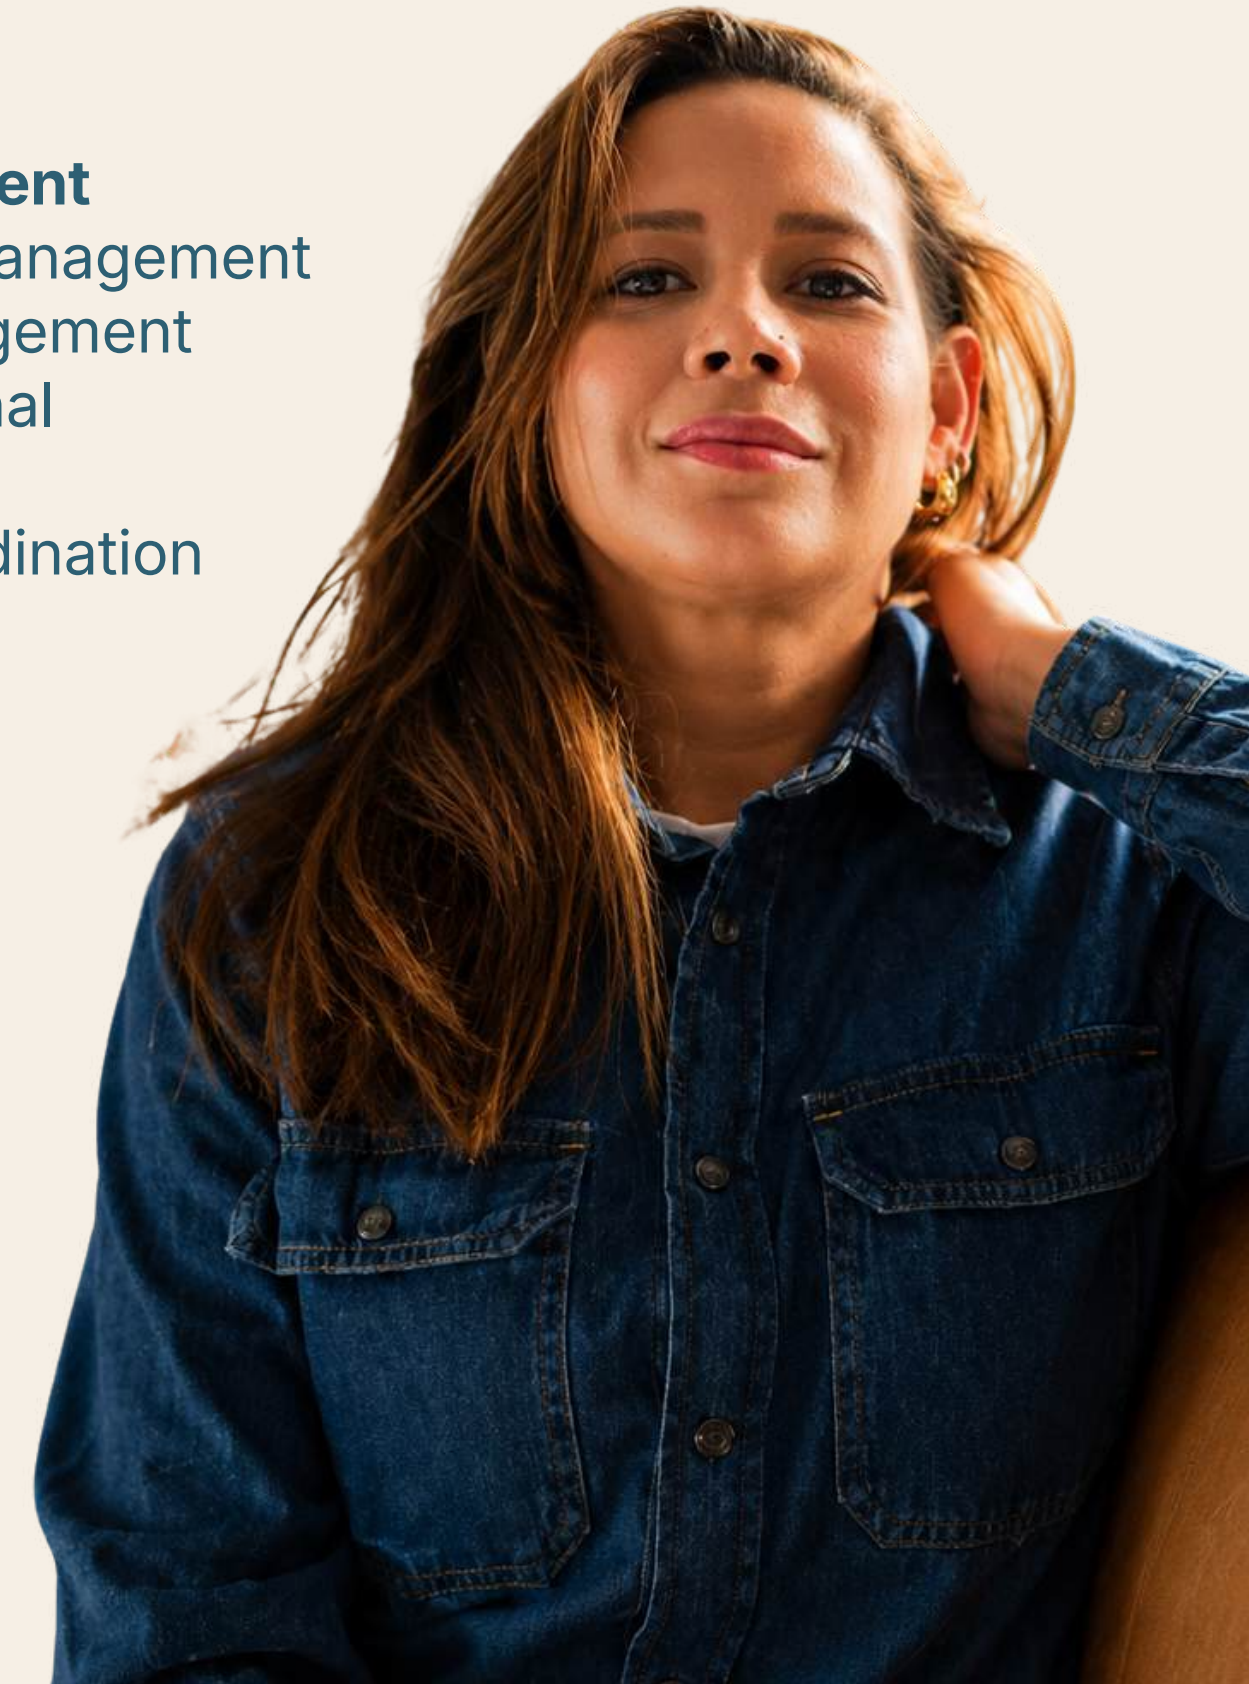

- Regulatory Compliance
- Compliance Monitoring
- Audit Management
- Risk Management
- Governance Framework Design

Data & Analytics

- KPI Design
- Dashboard Development
- Performance Analytics
- Data Integration
- Executive Reporting
- Data Visualization

Project Management

- Stakeholder Management
- Change Management
- Cross-functional Leadership
- Program Coordination

Tools Used

Project Management

- ClickUp

Reporting & Analytics

- Looker Studio

Enterprise Systems

- AMATIA

Productivity

- Microsoft Excel
- Microsoft PowerPoint

Google Workspace

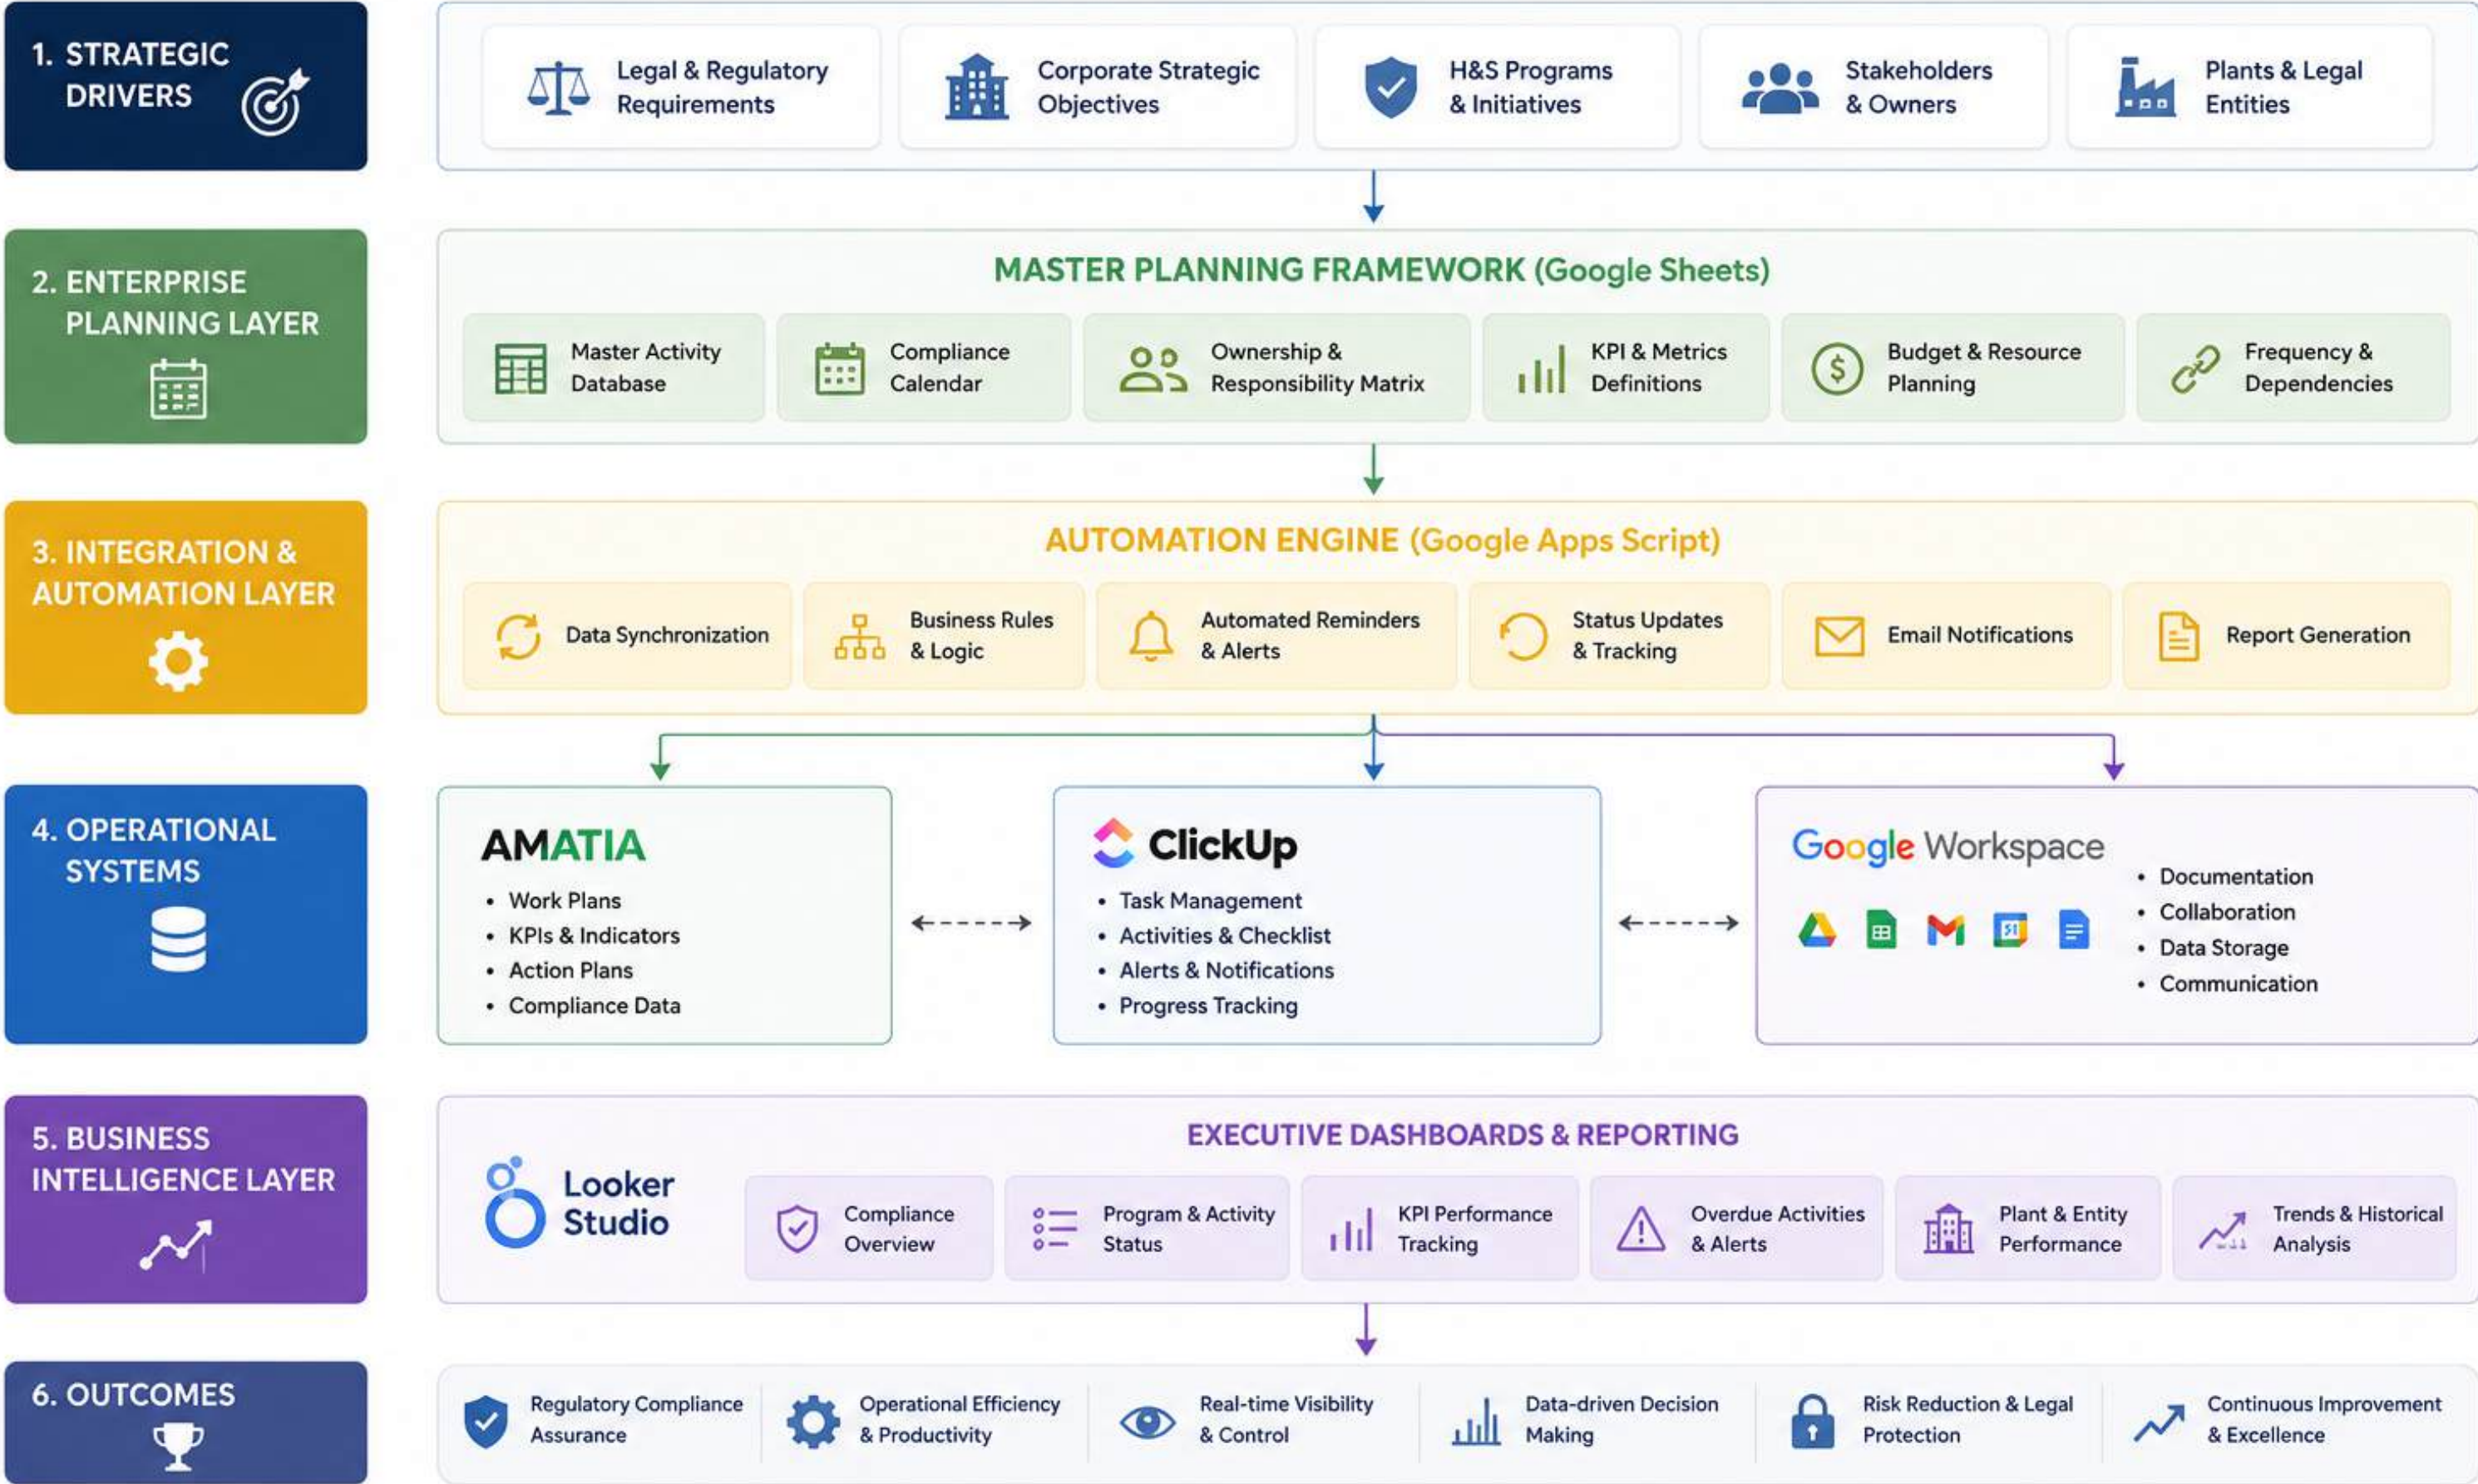

- Google Sheets
- Google Apps Script
- Gmail
- Google Drive
- Google Calendar

ENTERPRISE PLANNING ARCHITECTURE

Integrated Operational Management & Compliance Framework

THE RESULTS

The framework transformed operational planning from a reactive, spreadsheet-driven process into a centralized compliance and performance management system.

By integrating planning, execution, reporting, and monitoring across multiple enterprise platforms, the organization significantly improved operational visibility, accountability, and regulatory readiness while reducing manual coordination efforts and enabling proactive decision-making.

Business Impact

- Reduced manual planning and follow-up effort by approximately 70% through workflow automation and platform synchronization.
- Centralized more than 800 recurring operational and compliance activities into a unified governance framework.
- Automated reminders, alerts, KPI updates, and executive reporting across multiple enterprise systems.
- Improved compliance visibility by plant, legal entity, responsible owner, reporting period, and program.
- Strengthened regulatory readiness by providing real-time monitoring of mandatory legal obligations.
- Reduced dependence on manual follow-up and individual knowledge, improving operational continuity and governance.

Operational excellence starts with visibility, structured planning and measurable performance. **Let's build a framework that helps your teams stay aligned, accountable, and focused on results.**
