

CASE STUDY

Colcafé - Budget Governance &
Performance Visibility

Karime Martinez
Business Operations & Data Analyst

Context

Colcafé, a leading organization in the food manufacturing sector, manages complex operational budgets distributed across multiple initiatives and production areas. As HSE Coordinator, I was responsible for ensuring financial visibility and supporting leadership in strengthening budget control, forecasting accuracy, and execution discipline.

The organization required a more reliable and structured approach to monitor budget performance and ensure alignment between planned and actual spending. My role focused on analyzing financial execution patterns, identifying gaps in visibility, and designing governance mechanisms that could improve decision-making quality and strengthen accountability across operational and leadership levels.

Business Operations & Data Analyst

The Challenge

Limited visibility into budget execution and weak monitoring structures resulted in low forecasting accuracy and misalignment between planned and actual financial performance.

The organization faced significant limitations in financial control and visibility:

- Budget information was fragmented across initiatives
- Limited real-time visibility into execution progress
- Forecasting was based on incomplete or delayed data
- Lack of standardized tracking mechanisms
- Weak alignment between operational and financial planning
- Minimal accountability for budget deviations

This created:

- Reduced confidence in financial planning
- Reactive rather than proactive decision-making
- Difficulty identifying overspending risks early
- Inefficiencies in resource allocation
- Limited transparency for leadership review cycles

The core issue was not budget availability, but absence of a structured system to track, interpret, and govern financial execution.

The Approach

Designed monitoring frameworks, reporting structures, and performance KPI monitoring systems, for budget tracking that provided real-time visibility into execution progress, through executive reporting dashboards supported by structured monthly governance reviews.

Integrated budget tracking processes with KPI monitoring systems and management reporting.

Solution Design

Implemented

- Standard operating procedures.
- Governance structures.
- KPI scorecards.
- Monitoring dashboards.
- Accountability frameworks.

Tools Used

- Excel | Google Sheets | Power BI /
Dashboarding Tools | Reporting
Automation Structures

Skills Demonstrated

- Business Analysis
- Financial Tracking &
Control
- KPI Management
- Executive Reporting
- Operational Intelligence
- Process Design
- Data-driven Decision
Support

Karime Martinez

Business Operations & Data Analyst

The Results

Improved budget execution accuracy, strengthened forecasting reliability, and enhanced financial visibility for leadership decision-making.

The new monitoring and governance mechanisms transformed budget management from a retrospective exercise into a proactive decision-making process. Leaders gained timely visibility into execution trends, allowing them to anticipate deviations earlier, allocate resources more effectively, and improve confidence in planning and forecasting activities.

Business Impact

- Increased budget execution accuracy from 88% to 99%
- Improved forecasting reliability and planning discipline
- Enhanced financial transparency for leadership
- Strengthened accountability across operational teams
- Improved decision-making speed and quality
